

Komori Color+

PDC Upgrade

PDC Upgrade

Upgrade from PDC to Color+

Modern technology has developed to such an extent that the original PDC-S and PDC-L system fitted to your press is unlikely to offer the multi-layered benefits of quality, productivity and efficiency that the print professional now needs to give him the competitive edge. Ageing equipment as PDS-SII will become unreliable and less accurate, leading to increased make-ready time and more running waste. In the near future, servicing costs will increase. PDC-S and PDC-L systems already reached the end of its serviceable life and spare parts become obsolete. It's now time to talk to Komori to upgrade to the latest generation of Color+.

Advantages of Color+

- M1 support to support latest print standard requirements, ISO 12647-2:2013.
- G7/PSO Updates to support latest print standards.
- Improved Inter-model agreement with eXact handheld spectrophotometer.
- BestMatch Update to improve adjustment recommendations for CMYK and spot colors on coated and uncoated substrates.
- Density values also for spot colors.
- Improved Reporting capabilities.
- PantoneLIVE support.

Upgrade from PDC-Lite to Color+*

Komori Color+ Density

- Track.
- Vacuum pump.
- Densitometric scanning head.
- Interconnection cables and electronic documentation.
- Standard Head: Medium Spot Head which supports measurement modes M0 and M1, and supports color bars with patches greater than 3.0mm in height x 3.0mm in width. See below for additional options.
- Software: Single license of Density Software, supports up to 8 printing units.
- Komori Color+ Density: incl. software (28", 29", 40").

*Upgrade from PDC-Lite with head returned.

Options

- Polarizer Head: Supports measurement modes M0, M1 and M3 (polarized). For use with color bars that have patches greater than 3.0mm in height and 3.0mm in width.
- Hand-Held: Komori eXact Advanced.
